

## **Final Project Proposal**

### **Team info**

Team name: Group 7

Team member names: Joe DiMarzio, Joey Kislowski, Neil Staehle, Calvin Stineburg

Assigned scenario: Farmer's Market

Farmer's of a local county are creating and utilizing market stands as a way of reaching the public and selling produce. It has become increasingly difficult to let customers know where and when they will be set up and be open for business.

### **Solution Description**

Webpage or mobile app that has a main landing page as well as pages that contain information for each farmer/business. Main page contains information on dates/locations of the market and then each farmer/business gets their own page as well with information on what dates they will be at the market, what they're selling, prices, etc. Farmers must login to update their page and only have access to their page. All of the website/app is publicly visible.

### **Communication**

Our team has an iMessage group chat that we will use as our primary form of communication. We plan to meet in-person at Wells or elsewhere when necessary to work on our project.
